Scope of Work for Workflow based Business

Siha Care is a fully functional, home healthcare service provider, based out of Finlan

Currently Siha Care is looking to expand into the UAE market. Based on the same, Siha Care is looking at automating their business flows and build a transcational digital platform with workflow enabled by default. Siha Care is also looking at adding AI-based functionality to their digital platform to make it more robust.

To address this, Siha Care is looking at automating their customer & staff facing operations using technology to reduce their dependency on manual work in the operations side (back-office), while providing an integrated solution for improving customer service metrics to their users.

Given below are some of the broad targets that the customer wants to address –

1. Create an customer facing portal that can automate searching of staff for their requirements, in their immediate vicinity. This will also include a complete payment processing system, with ability for their customer's to select plans and make payments according to the plans.
    a. Siha Care would also like to integrate an AI based chat bot for getting information from customers about their specific requests
    b. The chat systems must also connect to the back-end with a matching algorithm, that will allow the right resource to be mapped to the specific requirement of the customer
2. Create a staff portal, where different categories of staff can register, upload their certificates and become a user of the staff portal
    a. The staff portal will contain all the details of the customers, including travel locations, etc…
    b. The staff portal will also track the attendance of the staff, when they are deployed onsite (for payment purposes)
3. Create a Healthcare partner portal, that will allow healthcare partners to register and display their specialities (Equipment, Hospitals, etc…)
4. Create an administrative back-end site, for employees of Siha Care, where they can do the following
    a. View customer requests for specific home healthcare requreiment
    b. View available, registered healthcare staff
    c. Ability to update rate cards and plans to the customer portal front-end
    d. Connect staff to specific customer requirements
    e. Ensure that customer's get details of the staff that is going to be deployed at their location
    f. Generate reports on various functionality such as utilization, etc…
    g. Provide an integrated, role based access systems for customers' that can incorporate workflows – for staff management, booking of staff, approval for billing, etc…
    h. Raise invoices for payment, along with payment links

Company Confidential All rights reserved. MVG Digital Consulting (P) Ltd

i. Create an omni-channel method to do all of the above, via AI-based chat bot, phone calls, email, whatsapp and more

Common User persona's

Clinical Staff Persona

Some of the common clinical staff persona would be as follows

- Registered Nurses (RNs)
- Licensed Practical Nurses (LPNs)
- Home Health Aides (HHAs) / Certified Nursing Assistants (CNAs)
- Physical Therapists (PTs)
- Occupational Therapists (OTs)
- Speech-Language Pathologists (SLPs)
- Social Workers

Employee persona

- Intake Coordinators
- Schedulers
- Billing Specialists
- HR Managers
- Quality Assurance Coordinators & Customer support managers

Customer Persona

- End users requiring support for other patients (Family Members/Caregivers)
- End users requiring support for themselves (Patients)

Partner persona

- Physicians
- Healthcare equipment manufacturers

User Journey of all persona's – via different channels of communication

Pre-Requisites:

- The customer searches and finds a Siha Home Care services, via various marketing channels
- There is a customer portal for the same

 All rights reserved.

Overall User Journey – From unregistered users to registered Customers

1. Users become Customers are registered
    a. The users can browse certain pages within the website, without continuing to login
    b. Users are auto prompted to continue with their registered email ID (mobile & web)
    c. Users then become anonymous users of the portal
    d. Users can then browse the entire website, and view all features
2. Customers' can do primary tasks via portal – Search for home healthcare/ clinical staff, view registered members in their locality, select their locality, select or search with their requirement
3. Customers' can do secondary tasks via portal – shortlist staff/select staff, make payment by selecting plans and getting confirmation of payment (invoice via email)
    a. Customer can select plan
    b. Customer validates email / phone number
    c. Customer make payment via payment gateway
4. Customers can do tertiary task such as - issue logging, queries
    a. Issue Logging
        i. The customer and their employees can raise issues via the portal by selecting AI based issue logger
        ii. Customer can also attach photographs of the issue (can be raised entirely through AI based Chat)
        iii. Customer will get an instant response on registering of the issue (with a ticket ID)
        iv. Customer will also get a notification, when the issue is resolved/closed by the respective department
    b. Queries
        i. Customer can ask a question on a subject, by category
        ii. Customer's question will be raised as a ticket to the assigned department
        iii. Customer's question will be answered by the department and will be closed the department on satisfactory resolution

Overall User Journey – for Employee Personas (Department executive and heads persona)

1. For Department Heads – issue logs
    a. View dashboard with all issues (closed vs open, escalated vs non-escalated, etc...)
    b. Login into portal via single signon to view all tickets
    c. View details of tickets and means to close them if needed
    d. Ability to assign ticket to other department / users
    e. Ability to answer questions raised by users via back-end of system
2. For Department Heads – Service Requests
    a. View services requests from all customers

Company Confidential All rights reserved. MVG Digital Consulting (P) Ltd

    b. Tag extra service requests (beyond the plan limits) and send to customer for approval
    c. Once approved, forward to accounts team for processing (to raise invoices)
3. For Department executives – queries
    a. Department executives to view dashboard of pre-assigned tickets (to the given department)
    b. Department executives to login to portal via single signon to view all tickets
    c. View details of tickets and means to close them if needed
    d. Ability to assign ticket to other department / users
    e. Ability to answer questions raised by users via back-end of system

Overall User Journey – for Accounts

1. For accounts – Viewing service extras that need to be billed
    a. Accounts can view all details of extra services used by customers
    b. Accounts can view approval (from customer and from Operations head)
    c. Accounts can then proceed to raise bill for payment, to customer directly
    d. Accounts can update payment details, on receipt of bill (if needed)

Overall User Journey – for Management

1. For Management – Reports and statuses
    a. Dashboards to view service usage by location, by customer, by company
    b. Detailed reports from dashboards to drill down into all details
    c. Summary reports for end of week, end of month, end of quarter and end of year transactions (only for data populated via the integrated portal and it's back-end)
    d. Custom sorting ability for each detailed report view, including search by specifics keywords, date range

Overall User Journey – From unregistered users to registered Staf

1. From Users to Validated staff
    a. Users will view the ads for staff registration or new customer requirements
    b. Users will browse the website and go to the registration section
    c. Users will validate their key contacts (email, phone)
    d. Users will then become validated staff users
2. From validated staff to registered staff
    a. Validated Staff will have to complete a details registration form
    b. Based on the same, the details will be review by Employee persona
    c. Once all details are verified, then employee persona will approve the validated staff
    d. Once staff is validated, they will get a registration ID (staff ID) and few of their details will be published on the front-end

Proposed Solution

The solution proposed by MVG Digital is as follows –

1. PHASE 1 - Design & Develop 3 portals – one for staff, one for partners and one for customers along with payment gateway
2. PHASE 2 - Integration with 3rd party systems – Workflow systems, AI based Chat, Government Portals for validation
3. PHASE 3 Integration with Hardware / Software systems for tracking staff and updating customer on progress (via Mobile app for Staff and Customer)

Solution Deliverables – Phase 1

1. Consulting services for requirements gathering (on-site)
2. UI/UX for integrated customer portal (front-end) – for all 3 sites
3. Primary Integrated Customer portal (front-end)
4. Integrated IAM or User Management (for customer's and admin users)
5. Integration with Payment gateway for customer portal
6. Admin user back-end system for administration (adding employees, adding staff from back-end and updating /publishing service plans)

Optional Solution Deliverables

Integrations:

1. Integration with existing systems (such a Government portals for validations)
2. APIs for extending existing system (create APIs to pull data from our system)
3. Integration with calendar system (integration with Google, Apple calendar). This will be above and beyond the calendar system that will be used within the integrated customer portal
4. Integration with QR system (either Google, or any other paid software). This is above and beyond what we will use for our own system (or the proposed system)

Solution Deliverables with timelines

S.No	Solution deliverable	Phase	Timeline	Notes
0	Requirements gathering & Scoping	Scope	3 Weeks	Must include customer & Government mandates
1	Designs – for all front-end – sign off (3 Portals in total)	Design	8 Weeks	Must include customer sign off and will include UX flows
2	Integrated Customer Portal – for customer facing & admin facing	Development	12 Weeks	Customer facing website will be mobile responsive (not the admin facing)

All rights reserved.

3	Integrations – IAM, AI-Based Chat, Calendar, QR system	Development	4 Weeks	Can be done in parallel and released in phases. Get DLT / Meta registration first (3-4 weeks for the same)
4.	Testing & Go-live (staggered)	Testing	4 weeks	This is common, based on overall development plan

Total time taken for development will be about 31 person weeks of effort. Actual development time will be about 24 Calendar Weeks, as some of the work will be done in parallel.

Open Source, custom integrated portal with admin back-end and & payment gateway integration (as given)

S.No	Description	In Units of	Qty	Unit Rate (AED)	Total Cost (AED)
	One-time charges (PHASE 1)				
	Front-end design, development with mobile responsive, setup & testing of entire site Integrations included – Whatsapp, Calendar	Person Weeks of effort	31	5,000	155,000.00
	Total Cost (one-time) for PHASE 1 (One Hundred & Fifty Five Thousand AED ONLY)				**155,000.00**
	On-going charges PHASE 1- (for all 3 portals, including back-end)				
	Hosting Charges – Dedicated Server	In Site cost	2	1500.00/ Month	3,000 / Month
	Backup & DR (30 mins RTO and 5 mins RPO) for both	Server Availability	1	700/Month	700 / month
	Managed Services of eCommerce and app site	Managed Services	2	1200/Month	2,400/Month
	Total Cost				**6,100/Month**
	Whatsapp Charges				
	Plan usage charges (10,000 & unlimited conversations/24 hour period with customer). This includes the following type of message	Per Company	1	5,000/Month	5,000/Month

 All rights reserved.

	- Service Messages - Utility Messages - Authentication Messages User Initiated				
	Total Cost (Eleven thousand one hundred ONLY)				**11,100/ Month**

Payment terms & other conditions:

1. The project will be split into 4 phases, with each phase will be billed at 25% of total order value
2. Each phase will have a deliverable, namely –
    - Signing of contract/ Award of PO – 30% Advance
    - Design sign off – 30% on completion
    - Development sign off – 30% on completion
    - UAT & Go-Live – 10% on staging server sign off
3. No new development will be done, other than what is included in this scope of work
4. Extra development charges will be billed @ AED 5000 / Person Week of effort in case of new Change Requests (CRs)
5. Scope creep is capped @ 10% of total effort estimate. Anything more will be billed @ the change request rates (@AED 5000 / Person Week)
6. All hosting charges to be paid quarterly, in the beginning of the contract period, along with any extra usage billed separately at the end of the previous month
